MAINSTAR

Release Announcement for 1.401 of:

Mainstar®: Mirroring Solutions™/ Volume Conflict Rename™

New Optional Command to Support Multiple Sites or for Data That Has Been Moved Multiple Times - VOLOPTIONS (LIST | CLIP | UPDATE(NEWTARGETS))

A new optional command has been added to Mirroring Solutions/Volume Conflict Rename (MS/VCR). The VOLOPTIONS (LIST | CLIP | UPDATE(NEWTARGETS)) option is intended for situations when the MS/VCR COPY step is run at one site (SITEA) and the MS/VCR RENAME step is run at another site (SITEB) or for data that has been moved multiple times at the primary site.

MS/VCR uses a journal file to identify and communicate source and target volume pairs to MS/VCR commands. If the target volume names have changed, the journal must be updated with the correct target volume serials (VOLSERs).

- **VOLOPTIONS LIST** - will display the current source/target volume pairs in the journal.
- **VOLOPTIONS CLIP** - will clip target volumes to match the original target volumes.
- **VOLOPTIONS UPDATE(NEWTARGETS)** - will update the journal with the specified target volumes. If SITEB needs to use different target VOLSERs than those used at SITEA, this command will allow the current target VOLSERs in the journal to be changed.

More information about the VOLOPTIONS command is available in the *Mainstar: Mirroring Solutions/Volume Conflict Rename Installation and User Guide* (document 009-0202-06).
